Understand the Dangers of Hazardous Materials

It is important to ensure your employees understand the dangers of hazardous materials, know how they should be stored and wear the proper protective equipment when exposed to them.

A hazardous material is any item or agent (biological, chemical or physical), which has the potential to cause harm to humans, animals or the environment, either by itself or through interaction with other factors. Examples of hazardous materials include chemicals, toxic agents, corrosives, combustible or flammable chemicals.

Spill Cabinets

When storing flammable liquids or chemicals, consider the following factors to determine what cabinet is right for your workplace:

- What materials are being stored?
- What types of containers are being used?
- How much space is needed to safely store your materials?
- Are you in compliance with OSHA, EPA, DOT and NFPA regulations and standards?
- Can you easily identify and warn others of flammable contents?

SAFETY TIP

HAVE A SAFETY PLAN

It is imperative workplaces have safety plans in place in case working conditions become unsafe unexpectedly. Have your employees practice how to relocate themselves to a safe place in case of fire, heat, or chemical emergencies.
