

JUNE IS

National Safety Month

2021 Marks the 25th Anniversary of National Safety Council's National Safety Month, reinforcing the commitment that safety in the workplace has never been more important.

To honor Workplace Safety Month, the National Safety Council suggests preventing accidents before they occur, addressing on-going COVID-19 safety concerns, feeling safe on the job and advancing your safety journey all play a part in workplace safety.

EHS Managed Services

Respiratory Protection

With employees that are required to wear any tight-fitting respirator, from dust masks to supplied air systems, OSHA requires that you ensure the respirator mask fits the user properly for each make, model, and size they wear. Arbill EH&S Specialists will use qualitative or quantitative fit testing methods to ensure that each respirator user fits to the appropriate mask. They can also provide suggestions on different models and sizes for your job hazards and employee needs.

Noise Protection

Our team of Certified Industrial Hygienists use environmental monitoring and analytical methods to detect levels of hazardous noise in the workplace and determine employee exposure risks, while also providing the information you need about your specific workplace noise hazards. After identifying the sources of your potential problems, our team puts a customized plan in place to protect your employees that uses the latest industry recognized control measures.

Hearing Conservation

Excessively loud workplace environments don't just pose a risk to your workers' hearing; they threaten their overall safety as noisy environments often lead to other injuries and risks. Arbill's Certified Industrial Hygienists can identify the noise levels in your facility, design a program to ensure safe exposure for your employees and provide the latest, cutting-edge hearing protection technology. This helps you improve workplace safety and comply with OSHA hazardous noise protection standards.

PPE Assessments & Programs

Acquiring the right personal protective equipment for your business is critical to the health and safety of your employees. Arbill's EH&S Specialists and Safety Account Managers can assist in identifying exactly the right PPE you need for every aspect of your business. They then can provide information and training to your managers and employees to ensure proper inspection and use of the equipment, as well as develop job-specific plans for equipment selection and maintenance.

It's never too late to determine the right safety solutions for your team.

SAFETY TIP:

GENERATOR SAFETY

Excessive noise and vibration could cause hearing loss and fatigue that may affect job performance. Even if it doesn't seem excessively loud, it can still be hazardous noise exposure.
