

SAFETY TIP:

USE DIFFERENT LIGHTS FOR DIFFERENT HAZARDOUS LOCATIONS:

Understand the National Electric Code's (NEC) hazardous location class:

Class 1 Div 1:

Safe to operate in presence of flammable gases, liquids or vapors.

Class 2 Div 1:

Safe to operate in presence of combustible dusts.

Class 3 Div 1:

Safe to operate where easily ignitable fibers or flyings exist some or all of the time.

FROM ARBILL'S UTILITY EXPERTS:

In tight spaces and harsh and dangerous environments, utility workers live in a dangerous world each and every day. Whether they need PPE for working in manholes or fixing power outages, there are five constants to keep in mind to ensure that utility clients have the right PPE – including intrinsically safe flashlights available:

- Can I be sure it won't create spark issues or cause a fire?
- Will it turn on?
- Is it bright enough?
- Will they be able to see and see clearly through potential hazards to handle the required work?
- Is it durable enough to withstand high impact situations?
