

INDUSTRY EXPERT ARTICLE

Comfort without sacrificing safety.

FR safety apparel that also prevents heat stress.

There's more to FR (Flame-Resistant) clothing than protecting against burns. Reducing the risk of injury is an important aspect of FR clothing, but there's another factor just as vital, ensuring it's worn properly.

Any protection is useless if not used correctly. Seat belts only save lives if they're used before an accident occurs. In the same way, FR clothing needs to be worn to benefit from its flame-resistant properties. But during the summer can you be sure workers are wearing FR clothing properly? If clothing feels comfortable when worn, people are more likely to wear it the way it was designed. On the other hand, if workers feel that they will overheat while wearing the FR safety apparel, they're less likely to wear it.
