

SAFETY TIP

LISTEN UP...

If you must raise your voice to speak with someone at arm's length, then the noise is likely at a hazardous level. Ask your safety manager or direct supervisor to check the noise levels in your workplace, making sure they are below 85dBA.

Honeywell HL-400 AM

INDUSTRY EXPERT ARTICLE

How to Choose Hearing Protection to Avoid Overprotection

by Alexandra Serban
Honeywell

Driven by stringent industrial regulations, the US industrial hearing protection market is expected to surpass \$650 million by 2024, reports say.

This means hundreds of new earmuffs and earplug models will flood the market, making the quest for the perfect hearing protection PPE even more difficult. Especially since workers complain that HPDs are plain uncomfortable or interfere with other protective equipment like hard hats, face shields and respirators.
