To stay protected while facing inclement weather from exposure to cold, wet, snowy elements choosing the right protective layers is not only required but can also be strategic.

Offering your workers moisture wicking garments will keep them cool and dry.

SAFETY TIP
COLD WEATHER LAYERING

Except the wicking layer, do not wear tight clothing. Loose clothing allows better ventilation of heat away from the body.

A focused approach is needed to ensure the protection of workers around hazards and to establish workplace and worksite safety and compliance.

Arbill's EHS Managed Services team can provide customized industry specific solutions to identify the risks and hazards and implement the proper corrective measures will ensure an overall safety culture.

Whether you require on-site or remote solutions, Arbill tailors the right program to fit your needs.

- Hot Work and Welding Training
- NFPA 70E/Arc Flash Training
- Arc Flash Study
- Cold Stress Awareness

It's never too late to determine the right safety solutions for your team. Reach out today to speak with an Arbill Safety Advisor to learn more!
